★ Projects

Workout Buddy, Fitness App

[Link](#) (ReactJS JS Express Sass MongoDB Mongoose)

Full-stack app developed with **ReactJs**, **Express** and **MongoDB**

Implemented **CRUD** operations, with a **RESTful API** and **JWT** for authentication

Stored the state about the user with **React-Redux** and **React Redux Toolkit**

Deployed the front-end on a live production environment using **Netlify** and for the back-end on **render.com**

Rent-a-car, Web app for renting cars

[Link](#) (ReactJS MongoDB Prisma Tailwind NextJS)

Full-stack app developed with **ReactJS**, **NextJS** and **MongoDB**

CRUD operations and authentication implemented with **NextJS** routing and authentication

Deployed the app on **vercel**

Application has functionalities for both user and administrator

To Do App

[Link](#) (ReactJS Tailwind Firebase)

Full-stack app developed with ReactJS and Firebase(BaaS)

For the **CRUD** operations was used the **Firestore** NoSQL database and for authentication Firebase utilities

The application was deployed initially on **Firebase** with **Firebase Hosting** but not it's on **vercel**

Weather App

[Link](#) (JavaScript HTML CSS)

Simple app for weather information with relevant information

Uses an **public API** to get the desired information

It was deployed using **GitHub pages**

Developer Student Clubs UAIC, Iași

November 2020 — April 2021

This was split in two parts: the first part included courses about front end(HTML,CSS,JS) and some React. Second part was a project with a task that was done in React. During the project we used Scrum framework and we worked with other teams like back-end, design and marketing.

★ Self-taught Skills

I learned front-end on my own which involves: HTML, CSS, React, TailWind/Sass, Express and some TypeScript and NextJS. The skills I obtained can be seen in the Projects section on my E-Portofolio. In these projects I learned how to make a project from scratch, use APIs, use 3rd party tools as back-end, create intuitive and maintainable UIs, getting a grasp of how these technologies work alone and together.
